

OpenMates

Digital team mates
For all of us.

Designed & built by

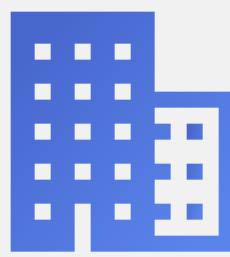

glowingkitty

Problem

ChatGPT, Claude, Gemini & co are poorly developed products and will always remain so, because of core weaknesses.

Maximum profit over maximum user happiness.

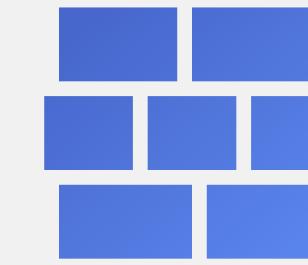

Enterprise focus, further increasing inequality

Engineering focus instead of UX design focus.

Billions of investment → Enshittification guaranteed

Closed ecosystem → limited usability

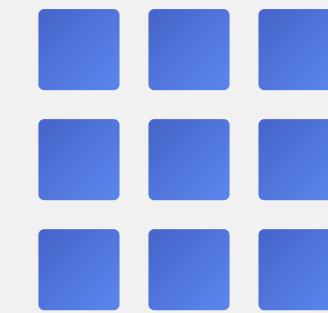

Open source alternatives: great ideology, bad usability

Solution

A better ChatGPT. Built for users, not for shareholders.

Focus on everyday users, freelancers & small businesses.

Open source path as insurance policy against enshittification

Focus: Best possible products for users, not max greed.

Privacy & security focus by default

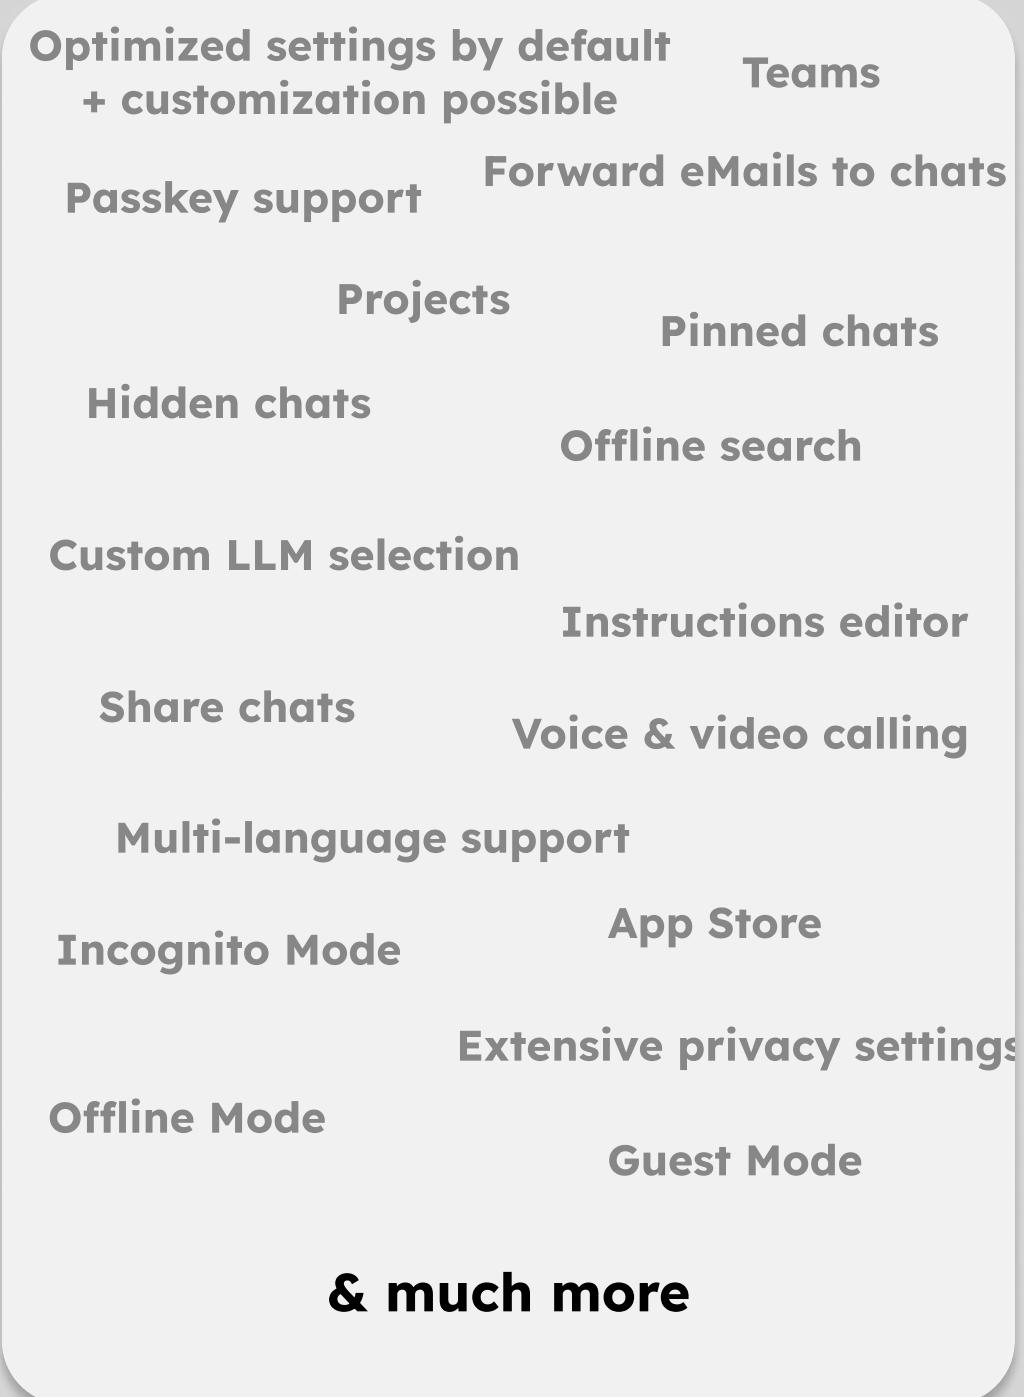

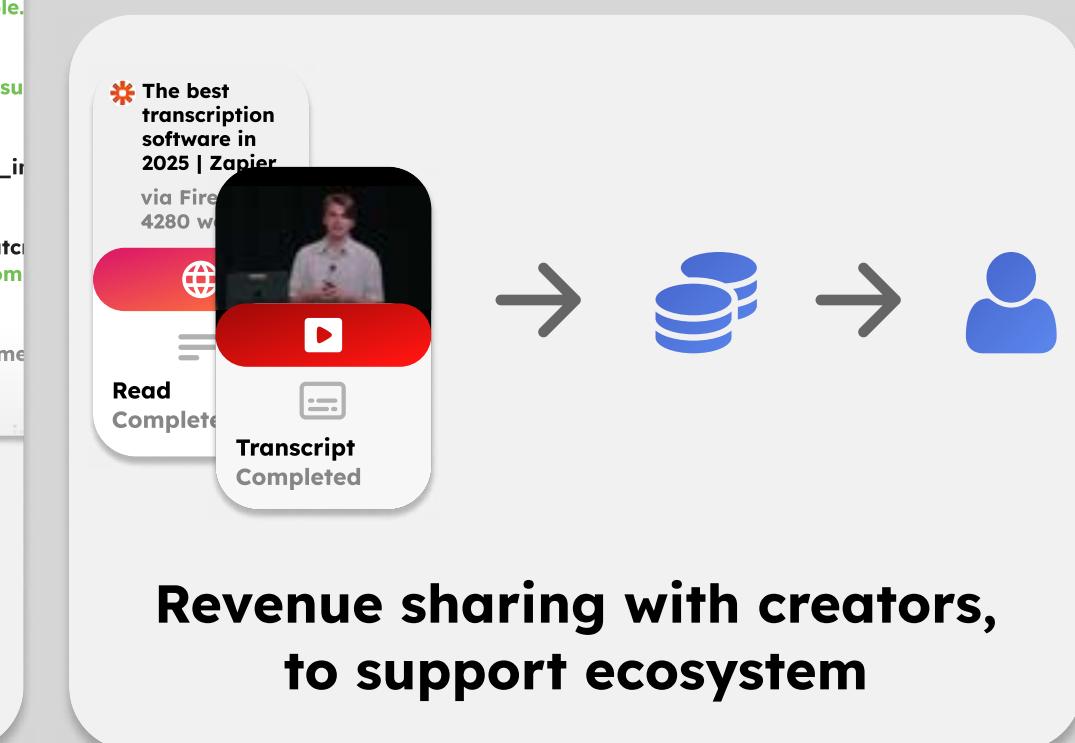

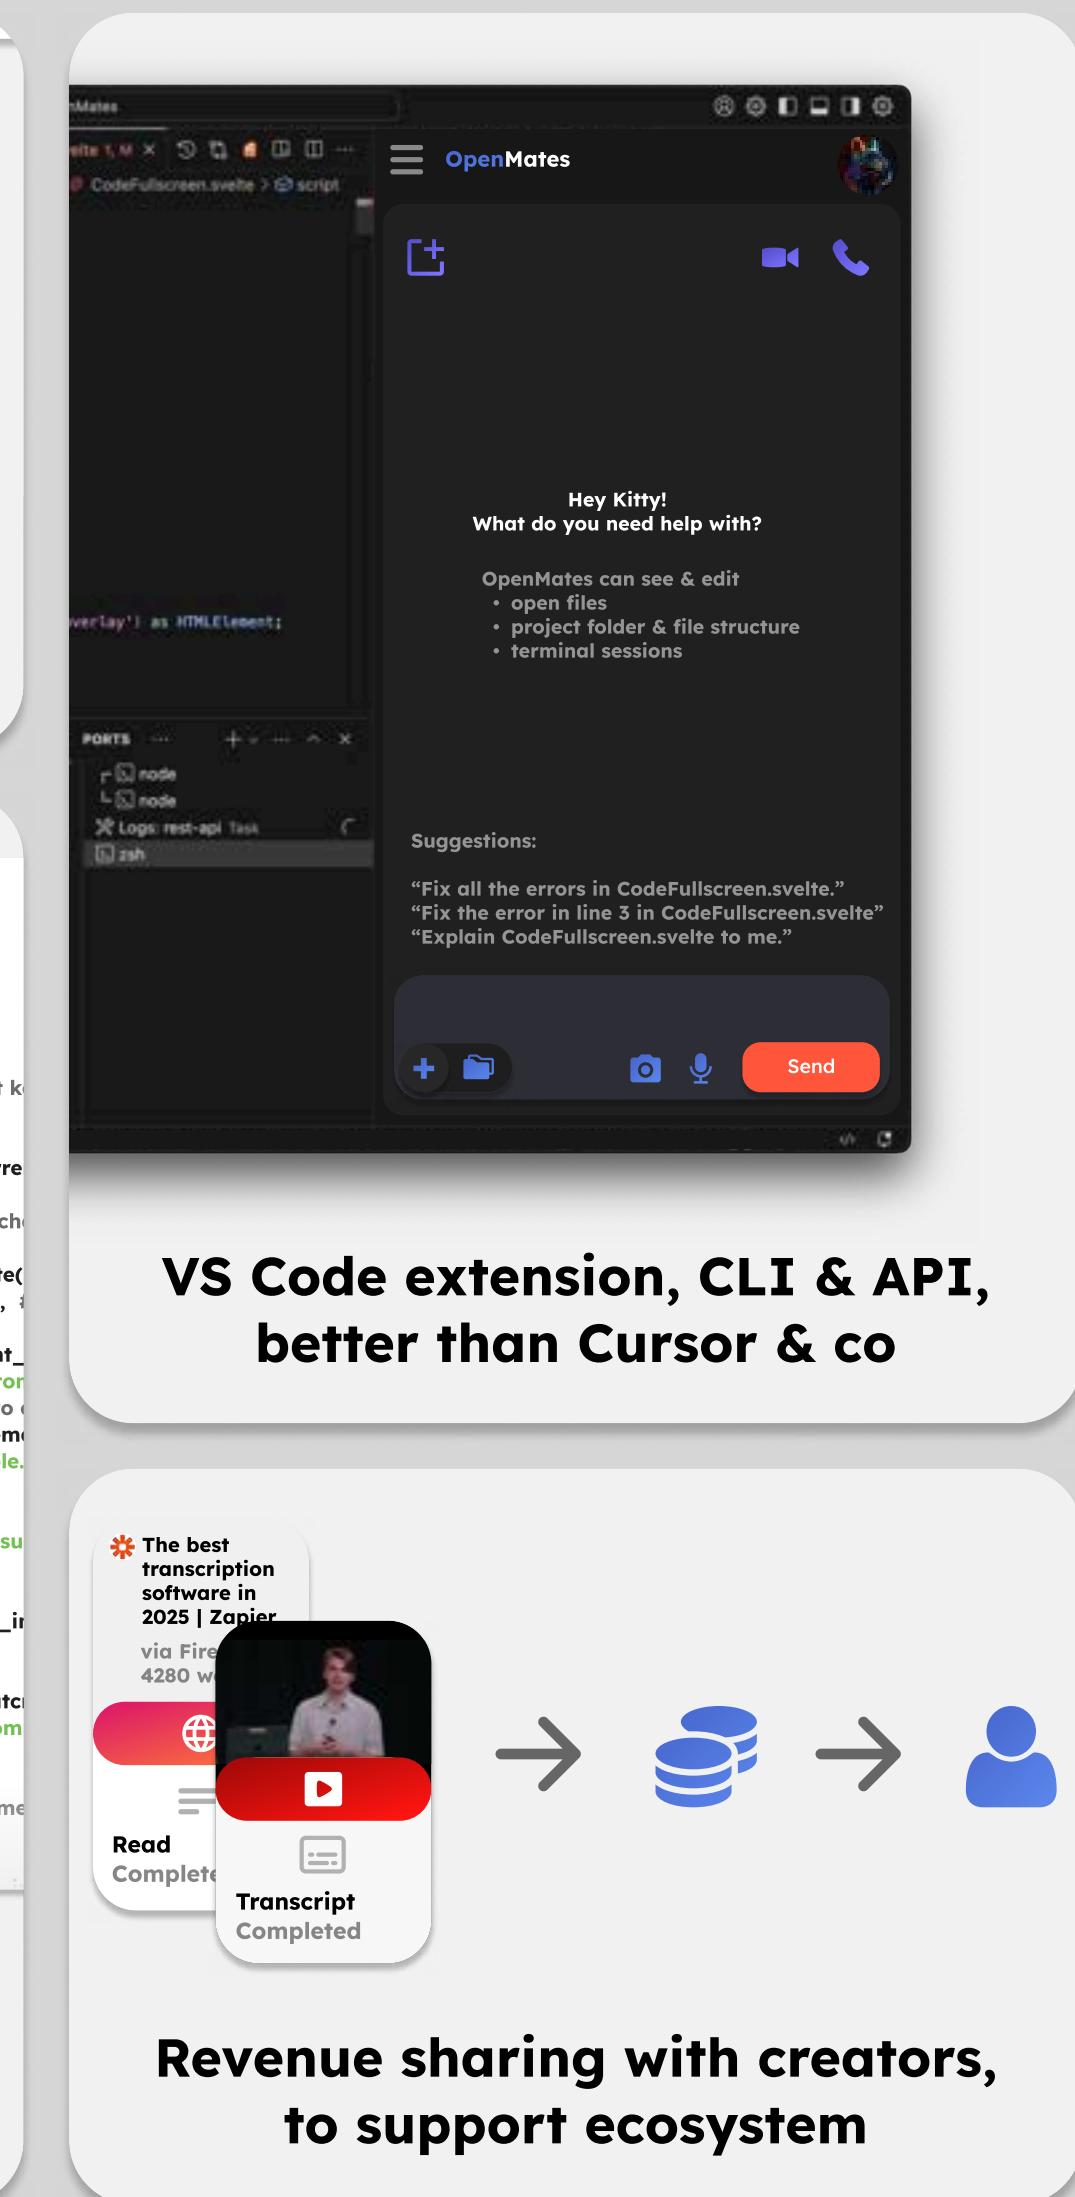

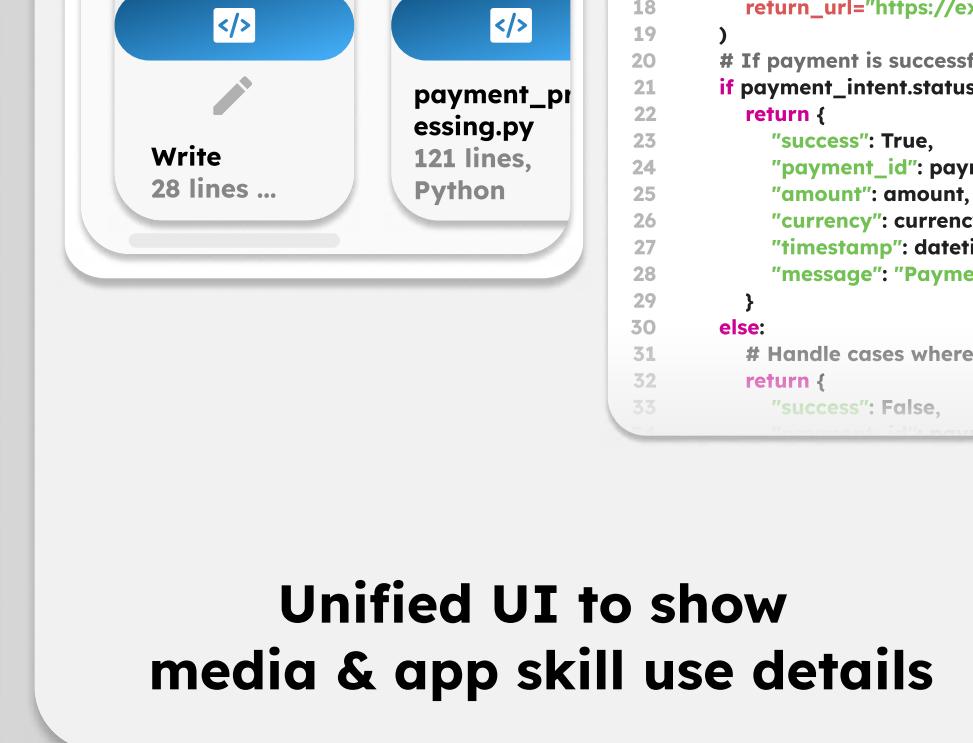

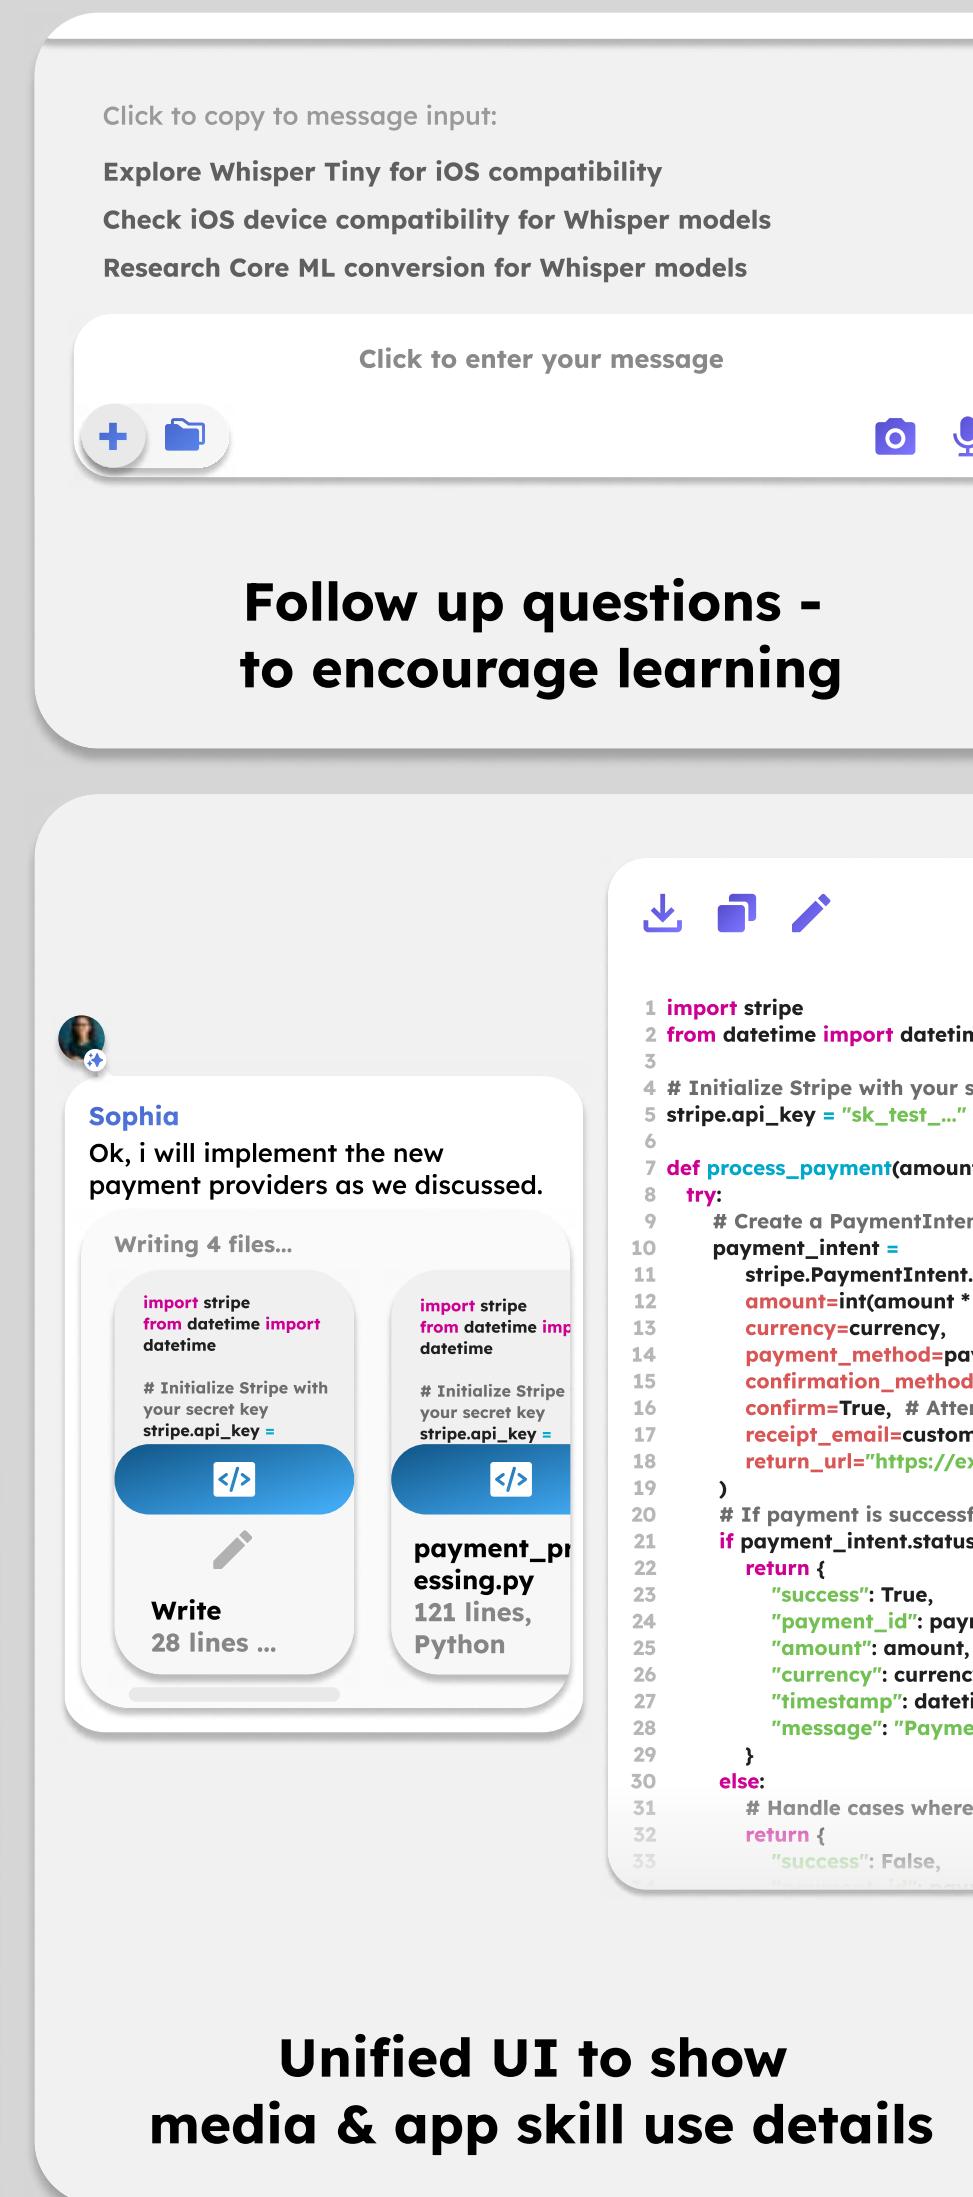

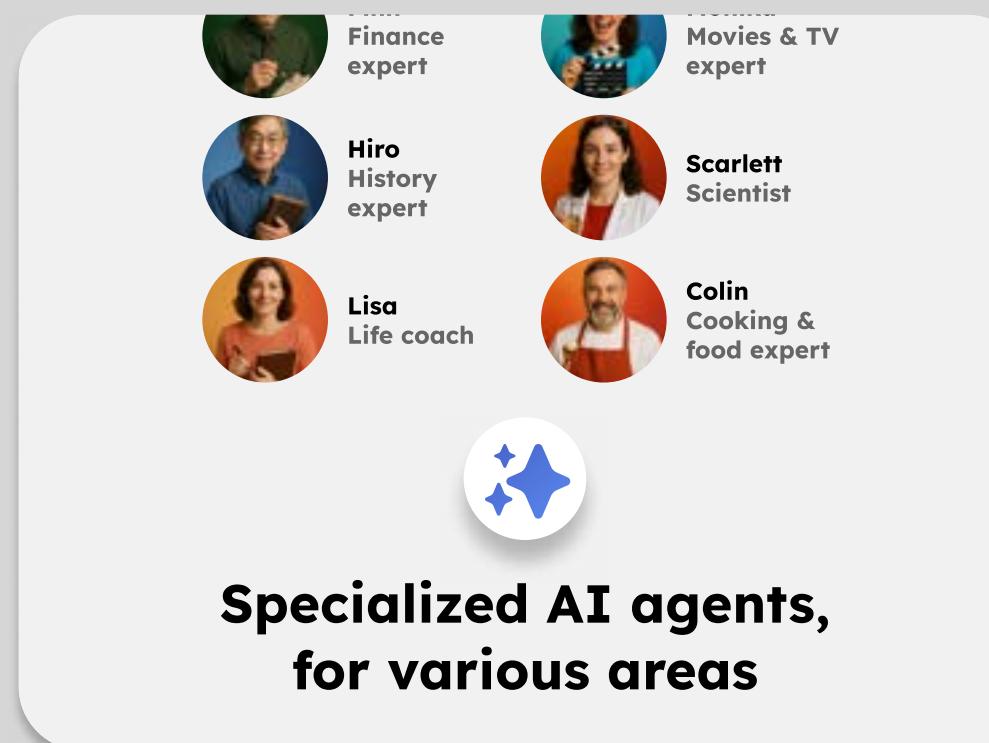

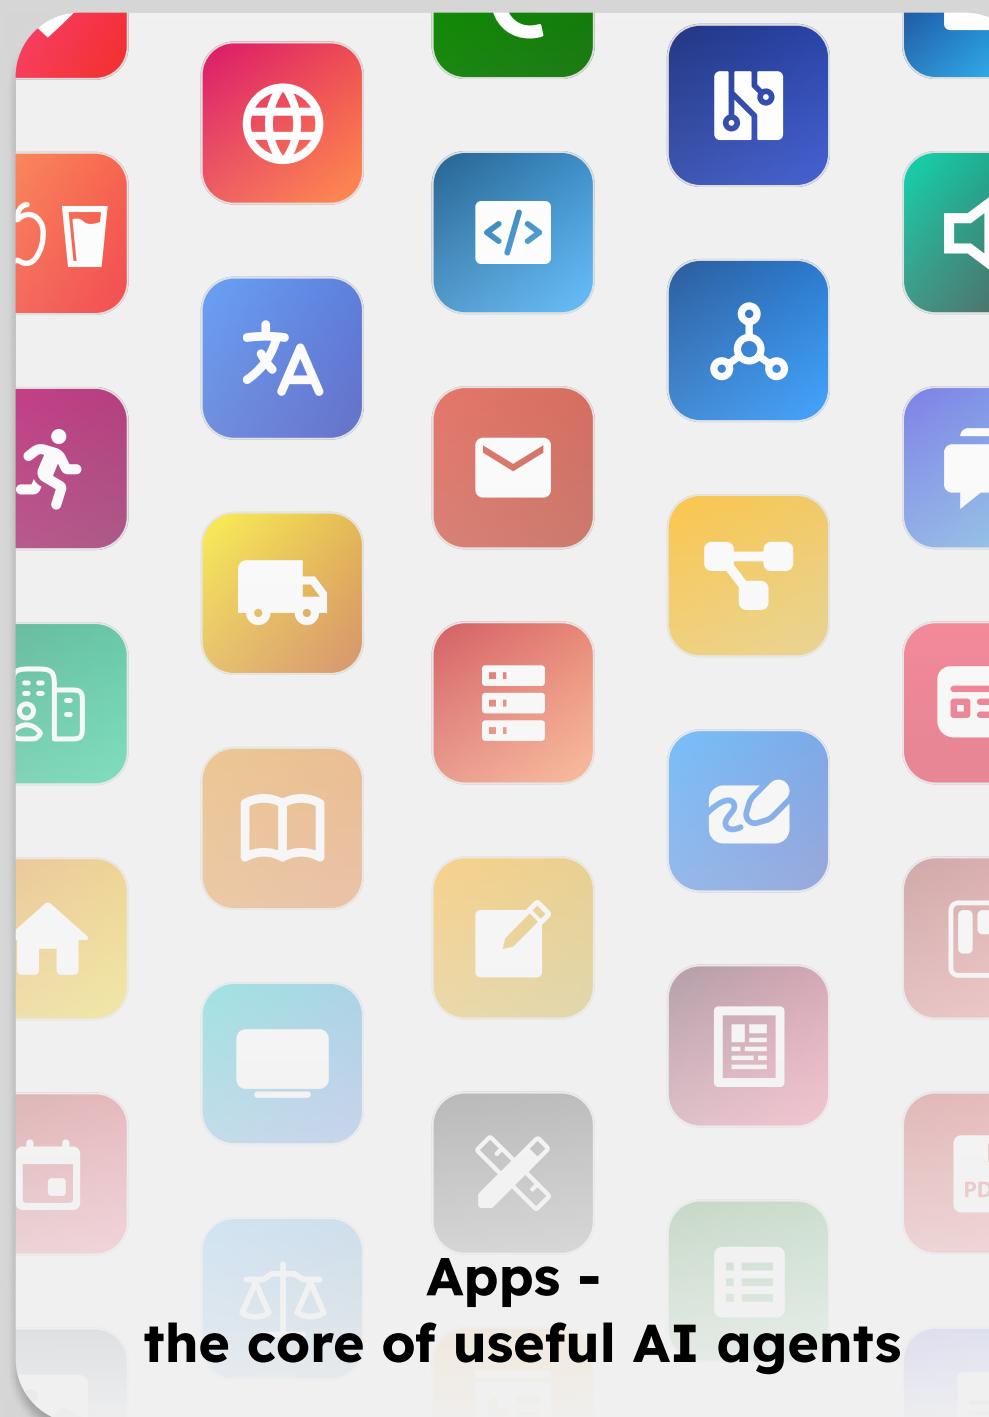

Open ecosystem, long term independency & sustainability

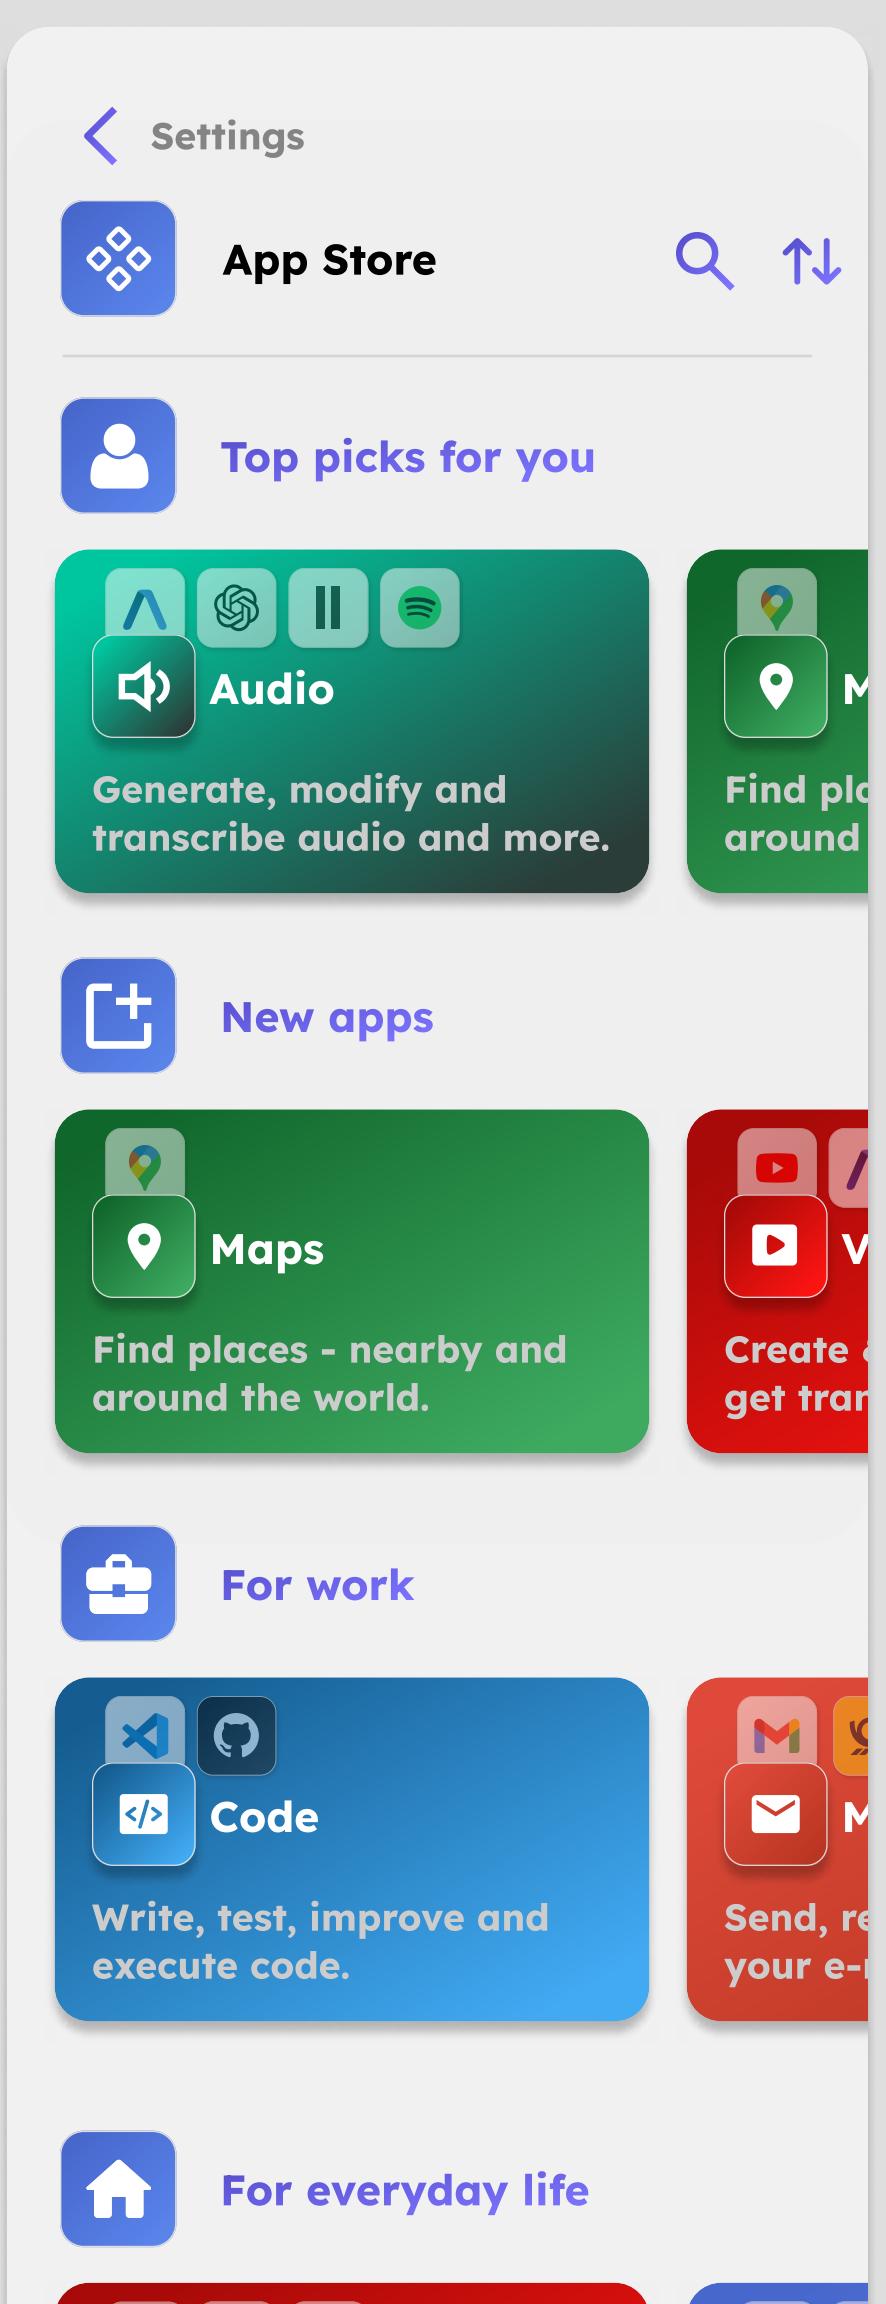

Goal

**Creating the one super app for most daily tasks.
Focused on the best user experience & privacy by default.**

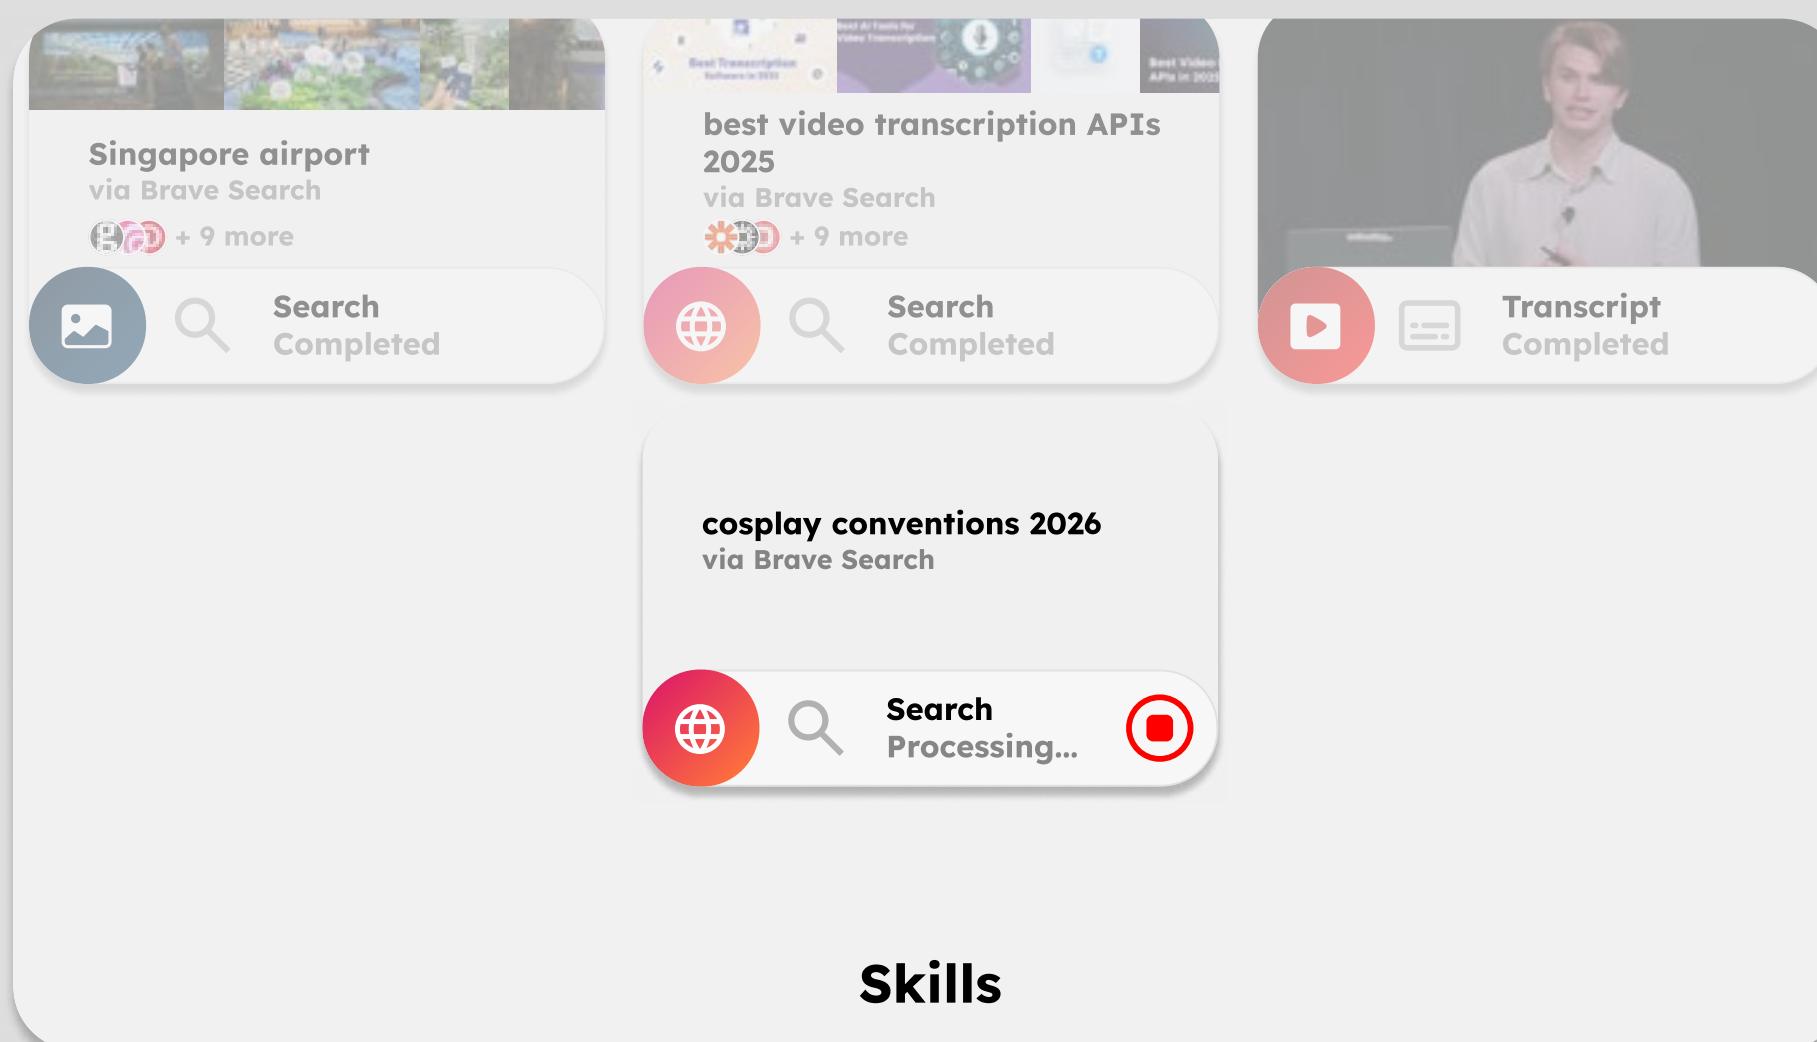

Apps

The core to make AI agents actually useful & reliable.

How apps work

Every app has four aspects:

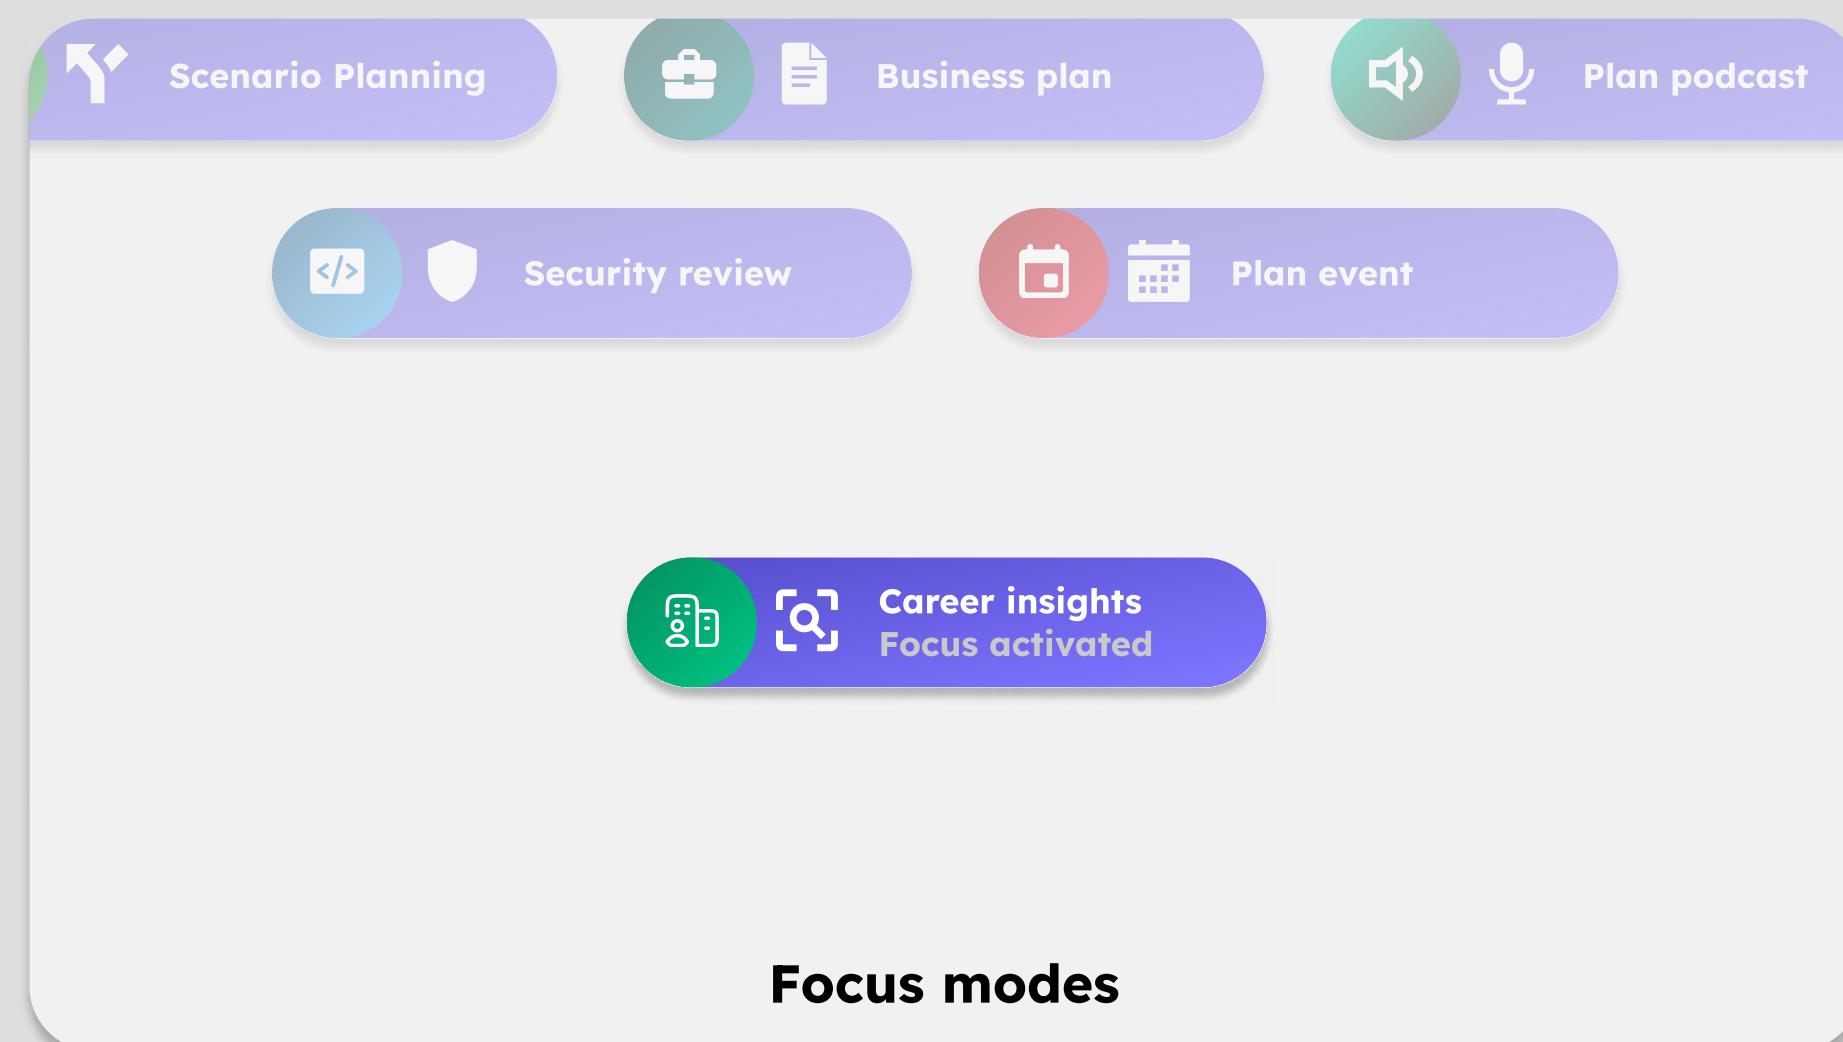

Skills

Singapore airport via Brave Search
Search Completed

best video transcription APIs 2025 via Brave Search
Search Completed

cosplay conventions 2026 via Brave Search
Search Processing...

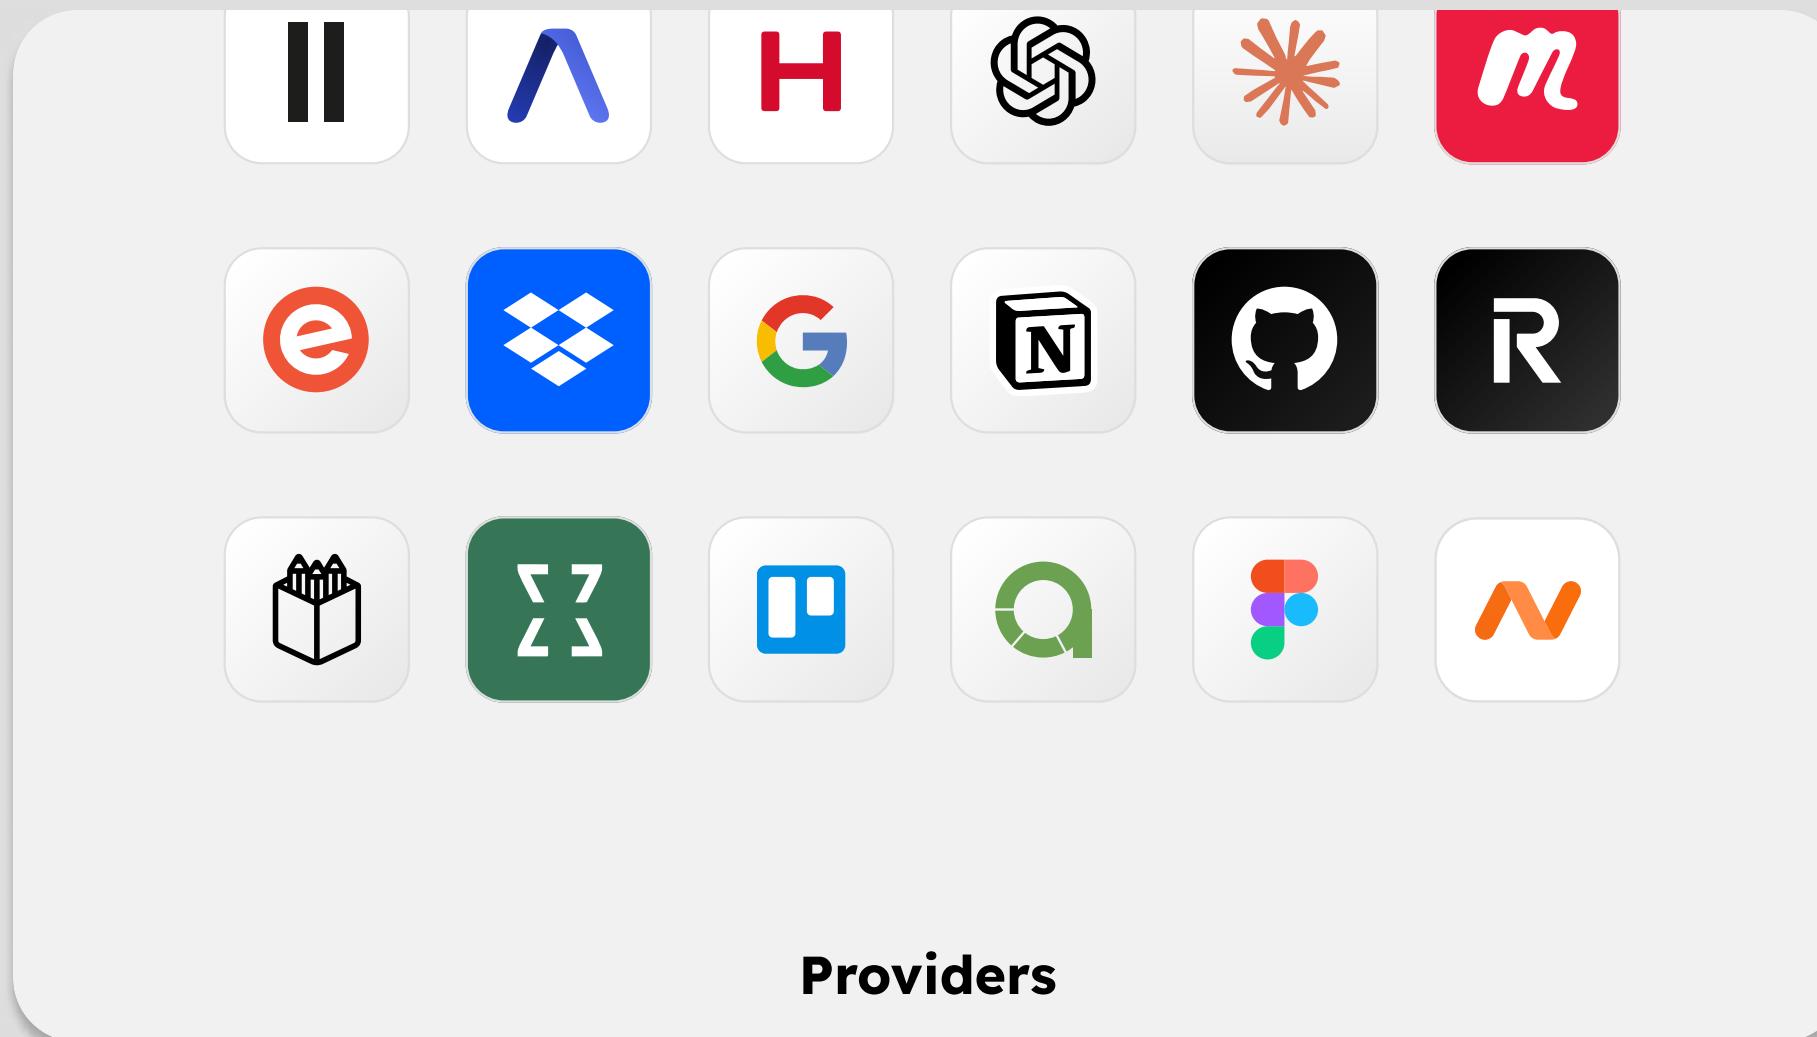

Focus modes

Scenario Planning
Business plan
Plan podcast

Security review
Plan event

Career insights
Focus activated

What's next

The next core features to be implemented:

Apps - the core of useful AI agents

\$ openmates "size of all app docs md files?"

\$ openmates server install

CLI + API for developers

Auto select the best AI model for every task

Unified UI to show media & app skill use details

`import stripe
from datetime import datetime

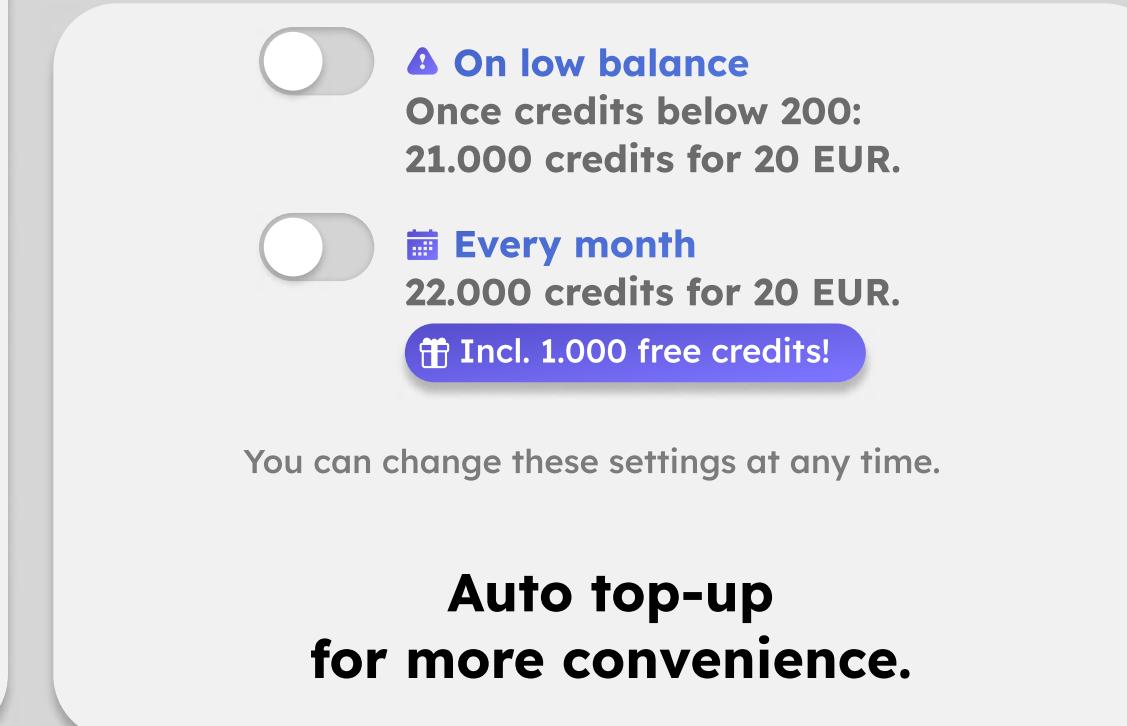

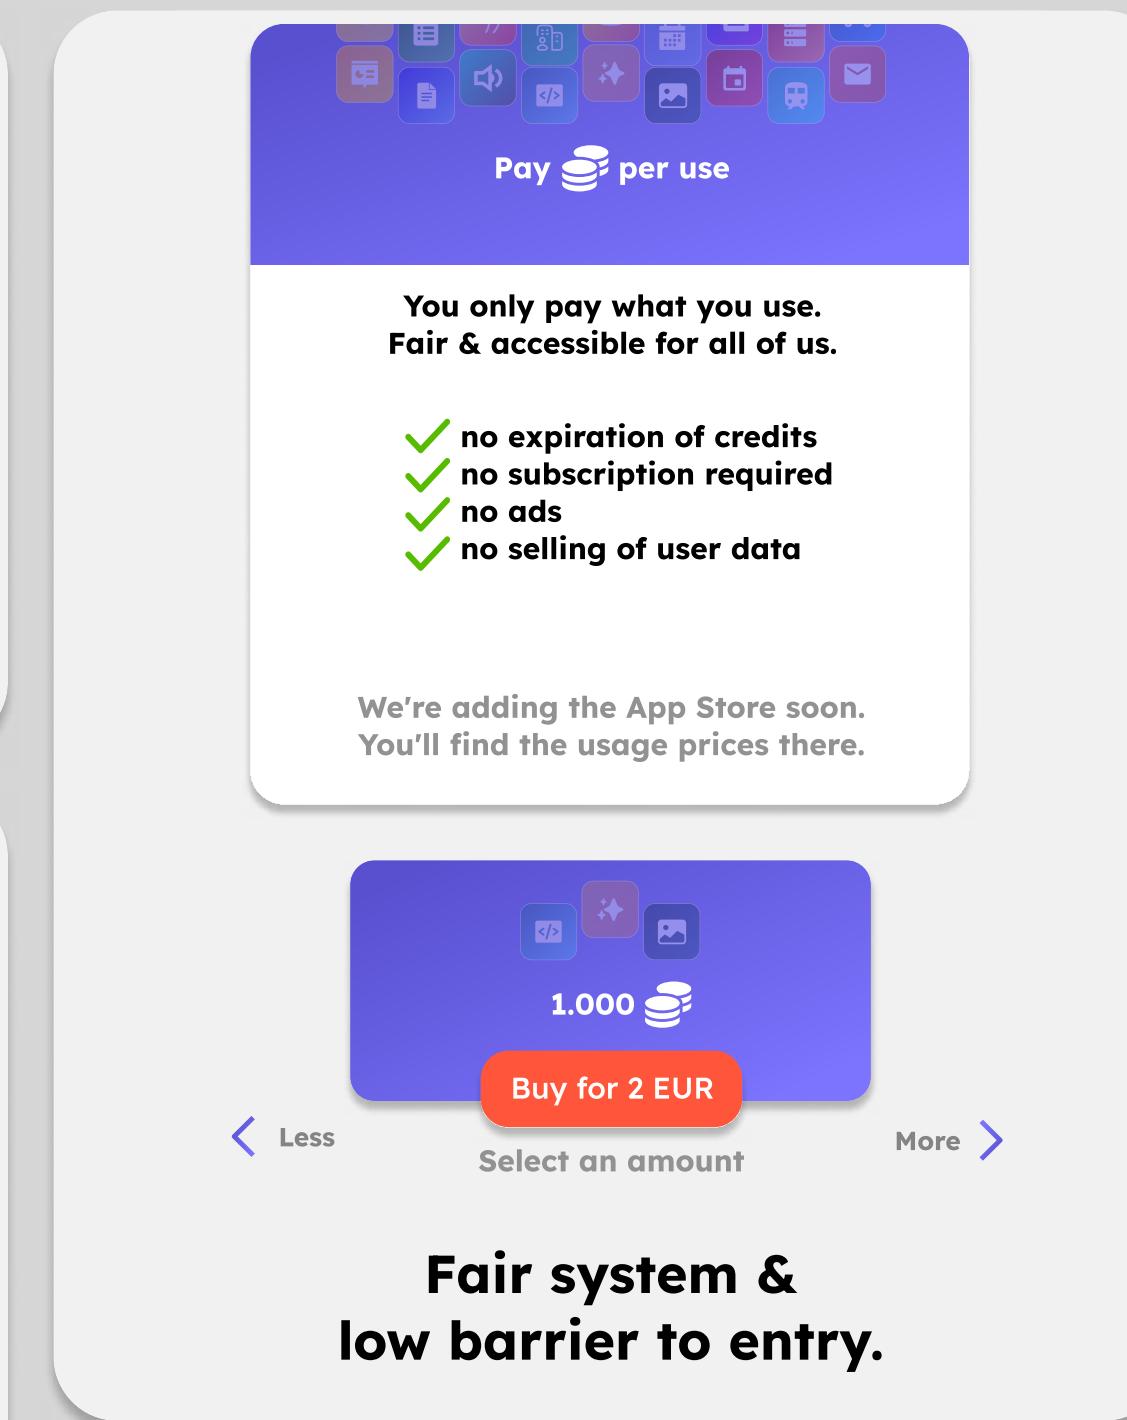

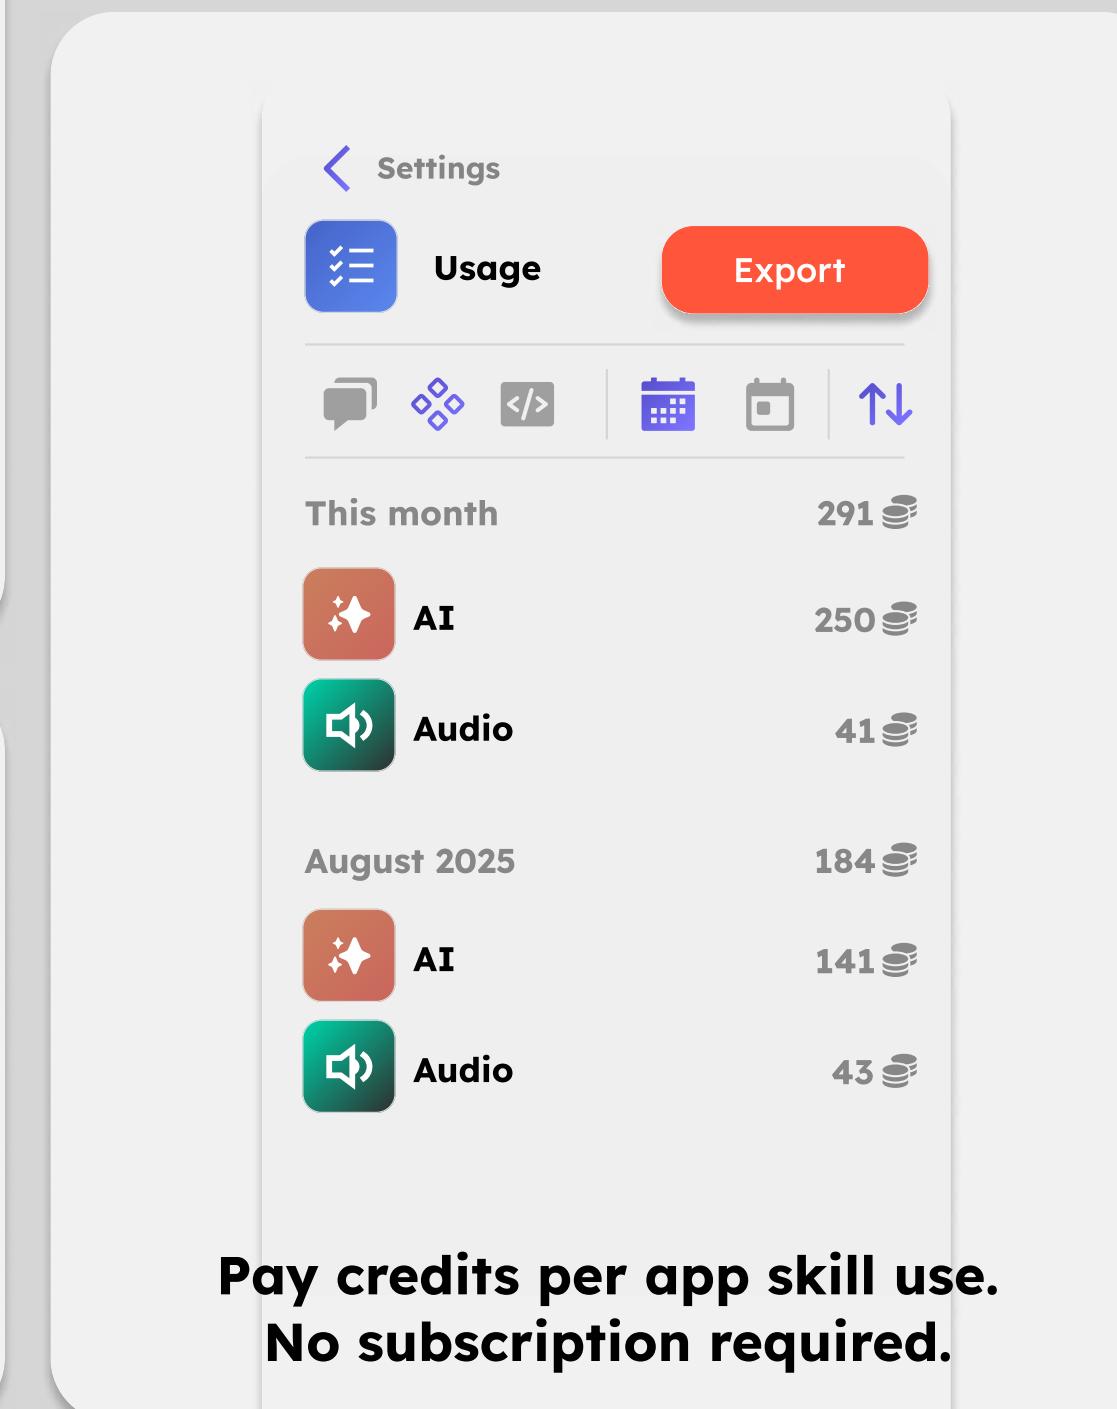

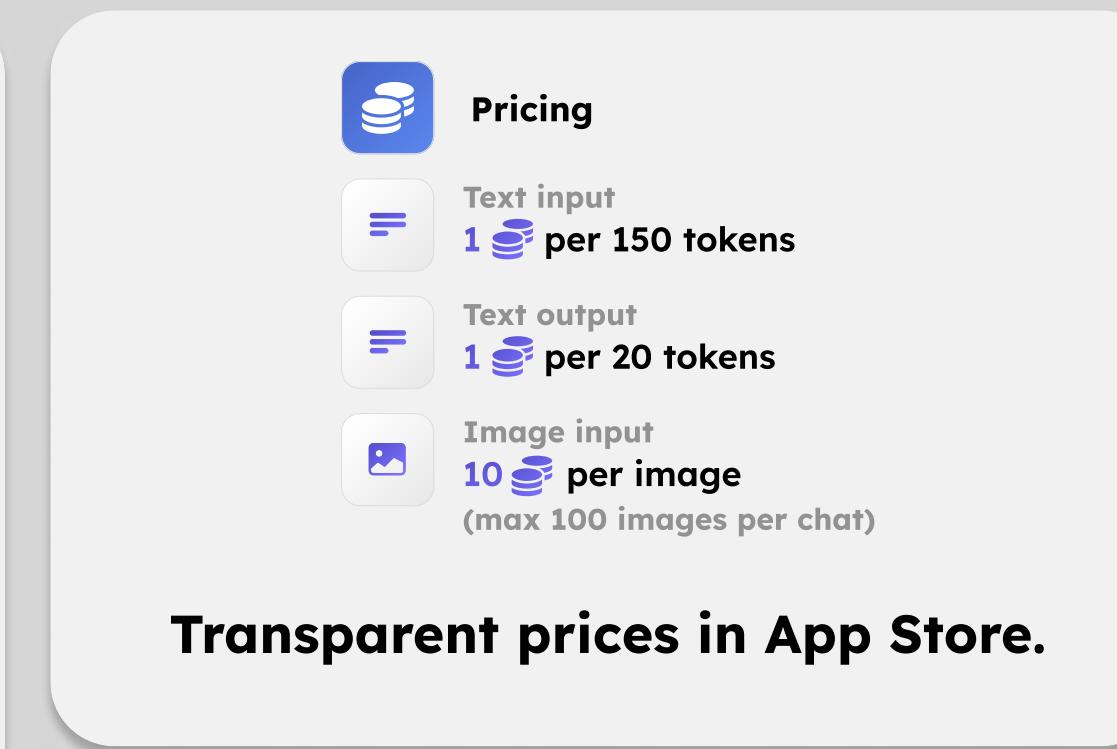

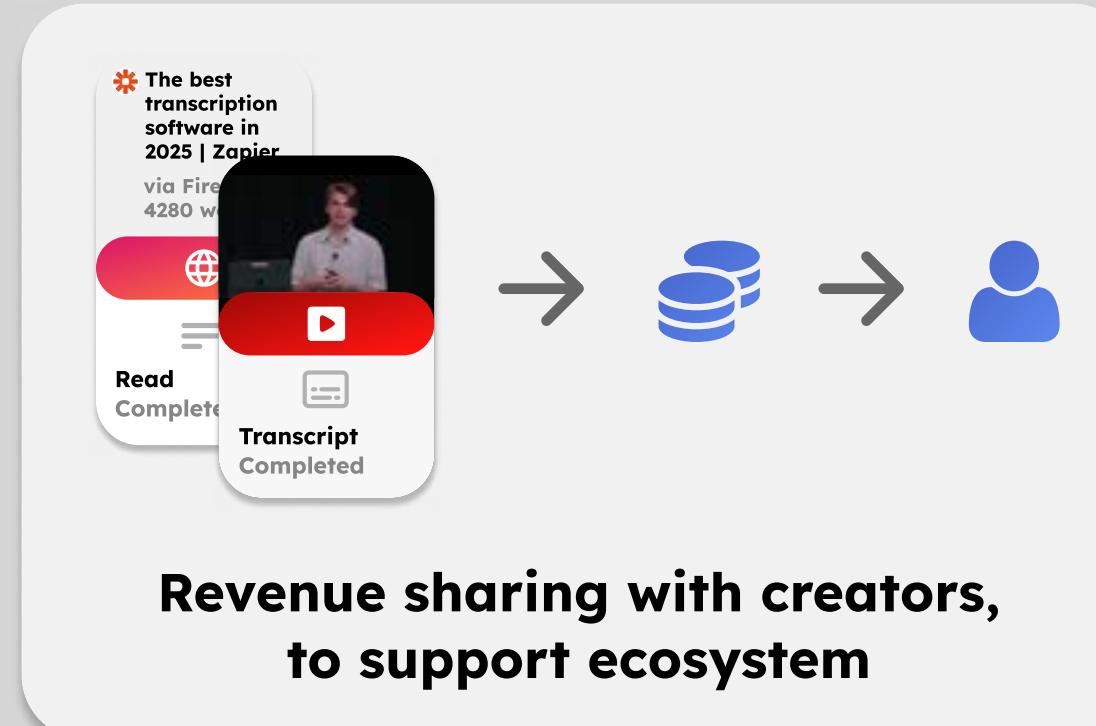

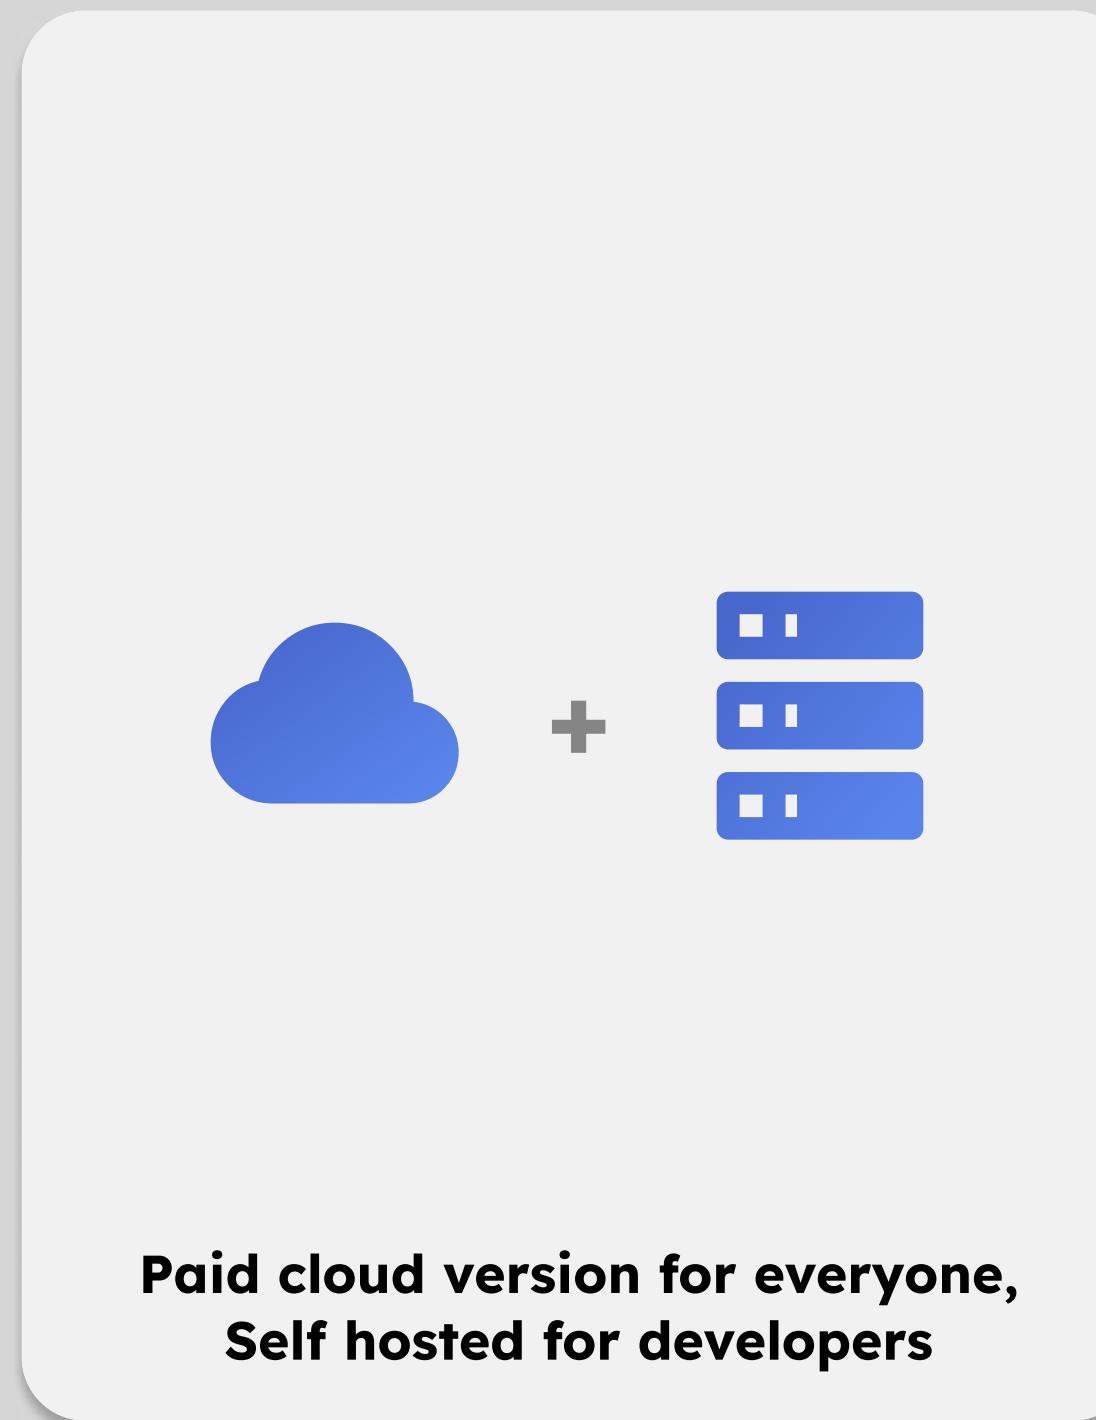

Initialize Stripe with your secret key
stripe.api_key = "sk_test_..."

def process_payment(amount, currency, payment_method, confirmation_method='automatic',
 confirm=True, receipt_email=customer_email, return_url="https://example.com/return"):
 # Create a PaymentIntent to charge the customer's card
 payment_intent = stripe.PaymentIntent.create(
 amount=int(amount * 100), # Convert amount to cents
 currency=currency,
 payment_method=payment_method,
 confirmation_method=confirmation_method,
 confirm=confirm,
 receipt_email=receipt_email,
 return_url=return_url
)

 # If payment is successful
 if payment_intent.status == "succeeded":
 return {
 "success": True,
 "payment_id": payment_intent.id,
 "amount": amount,
 "currency": currency,
 "timestamp": datetime.utcnow().isoformat(),
 "message": "Payment completed successfully!"
 }
 else:
 # Handle cases where payment requires user interaction
 return {
 "success": False,
 "error": payment_intent.error.message
 }
)`
